

# Through Our Eyes Only?: The Search for Animal Consciousness

What goes on inside the minds of other animals? Do they have thoughts and feelings like our own? To many people, particularly pet owners, the answers seem absurdly obvious. Others feel that the issue of animal consciousness is beyond the scope of science. In *Through Our Eyes Only*, Marian Stamp Dawkins presents the exciting new evidence in animal behavior that points to the existence of higher consciousness in some species. Here, Dawkins argues that the idea of consciousness in other species has now progressed from a vague possibility to a plausible, scientifically respectable view. Wild vervet monkeys seem to know which members of their group are reliable messengers of danger and which commonly cry wolf; vampire bats often give food to starving companions--but only to those who have helped them in the past. *Through Our Eyes Only* is an immensely engaging exploration of one of the greatest remaining biological mysteries: the possibility of conscious experiences in other species. Written in a lively style accessible to the general reader, the book aims to show just how near--and how far--we are to understanding animal consciousness.

*Through Our Eyes Only?: The Search for Animal Consciousness*. Marian Stamp Dawkins. Published by Oxford University Press, USA (1998). ISBN 10:0192619827. ISBN 13:9780192619827.
